

BodyShape Gym Website – Project Description

Project Title: BodyShape Gym Landing Page

Project Overview:

The "BodyShape" landing page is designed to create a professional, clean, and modern interface for a gym and fitness website. The goal of this project was to replicate the given Figma design using HTML and Tailwind CSS while ensuring a fully responsive experience across devices.

Technologies Used:

- **HTML** – For website structure and layout
- **Tailwind CSS** – For styling, spacing, and responsive design
- **Font Awesome** – For icons (e.g., social media, buttons)
- **GitHub** – For version control and project storage

Key Features Implemented:

- Fully responsive design for mobile, tablet, and desktop
- Consistent colors, typography, and spacing matching the Figma design
- Navigation bar with dropdown/hamburger menu for smaller devices
- Banner section with a call-to-action button and review video
- Fitness and nutrition plans displayed in a responsive grid layout
- Subscription plans section with highlighted recommended plan
- Trainers section showcasing team members
- Footer with company info, contact, links, and popular tags
- Interactive hover effects on buttons and links using Tailwind CSS

Challenges Faced:

1. Ensuring **grid layouts** remained consistent across all breakpoints.
2. Implementing **responsive spacing** to match the Figma design for medium devices.
3. Aligning logos and images properly while maintaining responsiveness.
4. Styling list bullets and hover effects with Tailwind CSS.
5. Converting the static Figma design into fully functional HTML + Tailwind code.

Outcome:

A professional, fully responsive landing page that matches the provided Figma design, enhancing the user experience for potential gym members and maintaining modern design standards
